

## Integration & Acceptance Test THD Analyzer

Bob Cordell's article (part 3) describes this as "Intermediate Check-Out" (page 57) and "Test and Calibration" (page 58-59). The system itself is tested slightly different from Bob's tests. This is because we use the  $\mu$ C board (PCB4) to control all switches.

Date test conducted:	18-2-'25
PCB1, PCB2, PCB3 hardware version:	V0.30 V0.21 V0.21
End-result of test	OK / <del>NOK</del>

### Intermediate Check-Out

Nr.	Description			
	<b>Entry-criteria:</b> <ul style="list-style-type: none"><li>- a tested and working <math>\mu</math>C control-board (PCB4) is needed for these tests.</li><li>- Unit-tests for PCB1, PCB2 and PCB3 boards have been done and no errors were found.</li><li>- Flat-cables (4) are connected between:<ul style="list-style-type: none"><li>• PCB1 and PCB4, PCB2 and PCB4 and between PCB3 and PCB4</li><li>• PCB2 and PCB3 inter-connect</li></ul></li><li>- Function-generator, oscilloscope, true-RMS multimeter.</li></ul>			
0	- For PCB1, PCB2, PCB3 and PCB4: Connect $\pm 15$ V and GND to <b>+15 V</b> , <b>GND</b> and <b>-15 V</b> .			
	Description	Result		OK?
		Expected	Measured	
1.1	<ul style="list-style-type: none"><li>- Connect <b>MAIN.OUT</b> (PCB1) to the <b>Input</b> on PCB2.</li><li>- Use the Level potmeter on PCB1 to set PCB2 input-voltage to <b>1 V<sub>rms</sub></b>. Use a true-RMS multimeter to measure this value as accurate as possible.</li><li>- Set <b>Frequency</b> to 2 kHz. <i>s</i></li><li>- Set <b>Output-level</b> to 5V. <i>s</i></li><li>- Set <b>Input-level</b> to 3V. <i>s</i></li><li>- Set <b>Sensitivity</b> to 0.3%. <i>s</i></li><li>- Adjust <b>R59</b> (freq.) and <b>R62</b> (ampl.) as necessary</li></ul>	<ul style="list-style-type: none"><li>- Analyzer has locked itself</li><li>- <b>E8</b> between -1V and -4V</li><li>- <b>E22</b> between -1V and -4V</li><li>- <b>E23</b> between -1V and -4V</li><li>- No oscillations</li></ul> <i>1.0029 V<sub>rms</sub></i>	<i>-3.65 V</i> <i>-2.72 V</i> <i>-3.34 V</i>	OK/ <del>NOK</del>
1.2	<ul style="list-style-type: none"><li>- Inject a distortion signal (<b>6 kHz, 150 mV<sub>rms</sub></b>) from a 2<sup>nd</sup> function-generator through a 62 k<math>\Omega</math> into PCB2 input.</li><li>- Calibrate the 0.3% Sensitivity setting as follows:<ul style="list-style-type: none"><li>• UART: type 'c11' and write down the value.</li><li>• <math>c11\_new = (x * c11) / (y * z)</math>, with:<ul style="list-style-type: none"><li>• <math>x = 150 \text{ mV}_{rms}</math> (2<sup>nd</sup> function-generator output)</li><li>• <math>y = \text{PCB1 output-value in mV}_{rms}</math></li><li>• <math>z = \text{value on SSD4 (e.g. 0.15)}</math></li></ul></li></ul></li><li>- Enter this new value by typing 'c11 c11_new', with c11_new being the number calculated.</li><li>- Check that SSD4 now displays <b>0.150 %</b>.</li></ul>	<ul style="list-style-type: none"><li>- Distortion is 0.15 %, SSD4 reading should be close to this value.</li><li>- Check signal at <b>E40 (DIST.OUT)</b>, this should be a clean 6 kHz signal <i>s</i></li></ul> <i>c11_new = 0.315113</i> <i>0.152% <math>\rightarrow</math> 0.150%</i>	<i>0.152 %</i>  <i>c11 = 0.320241</i> <i>120 mV<sub>pp</sub></i>	OK/ <del>NOK</del>
1.3	<ul style="list-style-type: none"><li>- Set <b>Sensitivity</b> to <b>1.0 %</b>.</li><li>- Inject a distortion signal (<b>6 kHz, 500 mV<sub>rms</sub></b>) from a 2<sup>nd</sup> function-generator through a 62 k<math>\Omega</math> into PCB2 input.</li><li>- Calibrate the 1.0% Sensitivity setting as follows:<ul style="list-style-type: none"><li>• UART: type 'c10' and write down the value.</li><li>• <math>c10\_new = (x * c10) / (y * z)</math>, with:<ul style="list-style-type: none"><li>• <math>x = 500 \text{ mV}_{rms}</math> (2<sup>nd</sup> function-generator output)</li><li>• <math>y = \text{PCB1 output-value in mV}_{rms}</math></li><li>• <math>z = \text{value on SSD4 (e.g. 0.500)}</math></li></ul></li></ul></li><li>- Enter this new value by typing 'c10 c10_new', with c10_new being the number calculated.</li><li>- Check that SSD4 now displays <b>0.500 %</b>.</li></ul>	<ul style="list-style-type: none"><li>- Distortion is 0.5 %, SSD4 reading should be close to this value.</li><li>- Check signal at <b>E40 (DIST.OUT)</b>, this should be a clean 6 kHz signal <i>s</i></li></ul> <i>c10_new = 1.043566</i> <i>0.465% <math>\rightarrow</math> 0.499%</i>	<i>0.465 %</i>  <i>c10 = 0.977517</i> <i>120 mV<sub>pp</sub></i>	OK/ <del>NOK</del>
